NOSB original annotation 1995: Sulfur dioxide may not be added to wine at levels greater than 100 ppm; the level of free sulfites may not exceed 35 ppm in the final product. This was amended in March 1998, "Sulfur dioxide is allowed only for use in production of wine that is labeled 'made with organically grown grapes.' " Stated in the processing committe report, and included in adopted recommendations to the Sec. on first proposed rule.
